

UV Risk Management Training Course

Half day course providing essential information to help organisations implement safe and effective UV light processes in the workplace.

This practical and engaging training course is designed specifically for health and safety professionals and duty holders responsible for managing UV light equipment and processes in the workplace.

Whether you're introducing UV for the first time or reviewing existing systems, this session will give you the clarity and confidence to ensure full compliance with the **Control of Artificial Optical Radiation at Work Regulations 2010** and **Directive 2006/25/EC**.
